## Achievement

Completed case study on **Railway Reservation** which is a Web-based System. The traditional way of booking a ticket is very time-consuming and cancellation is also a long process. The existing system has Latency while we search for train details. The existing system also gets crashed many times while booking a ticket. So, we will design a system which will enable the booking in any class, and a maximum of six berths/seats at a time, for a journey between any two stations served by a train.

Technologies used:

- **ANGULAR**
- **ASP.NET CORE**
- **Microsoft SQL Server**
